EDUCATION

Dalhousie University

Bachelor of Computer Science

GPA: 4.17/4.30

Halifax, NS

Jan 2023 – Jan 2027

EXPERIENCE

Software Developer

May 2025 – Aug 2025

Nautel Ltd

Halifax, NS

- Enhanced automated testing infrastructure within an Agile team, reducing QA workload and improving test coverage by 25%.
- Authored and maintained 150+ end-to-end tests using Typescript, Playwright and Cucumber, expanding coverage and preventing regressions earlier in the development cycle.
- Created and standardized 200+ unique Test IDs across application pages, with annotated documentation to streamline test creation and reduce QA/developer ambiguity.
- Improved repository health by introducing a repo-wide linter and enforcing test tagging conventions for Cucumber Given When Then scenarios.
- Implemented automated Git hooks (via Husky) to enforce code quality checks on every commit and push.

Full Stack Developer

September 2024 – Dec 2024

SimplyCast

Halifax, NS

- Individually resolved 50+ bug tickets, contributing to backlog reduction from 200+ issues to 90 as part of a 3-developer Agile development team, directly improving product stability.
- Diagnosed and fixed complex PHP and JavaScript issues using Chrome DevTools and Xdebug, reducing debugging time by an estimated 30% on high-priority cases.
- Resolved issues in Angular, Vue, and PHP components, modifying existing MySQL queries and writing new ones to fix bugs, enhance system stability, and reinforce full-stack development proficiency.
- Collaborated with senior developers outside the bug-fixing team on complex issues, actively seeking feedback during solution planning and incorporating their guidance to strengthen code quality.
- Developed, modified, and integrated API endpoints to resolve software bugs, ensuring smoother data flow and improved system stability.

PROJECTS

Course Management System | *Java, Spring Boot, Vue 3, SQLite, GitHub*

Sep 2025 – Present

- Built a full-stack course management system to organize and track personal course load, addressing gaps I encountered with existing tools like Notion.
- Developed a Spring Boot backend with API endpoints for courses and tasks, integrating SQLite for lightweight and dependable data persistence.
- Implemented a Vue 3 SPA frontend with Pinia and Vue Router, delivering reusable dashboards and course/task views for an intuitive user experience.
- Designed architecture with extensibility in mind, supporting future features such as GPA tracking, calendar synchronization, and deadline reminders.

2D Physics Engine | *C++, SDL3, Google Test, GitHub*

May 2025 – Present

- Developing a 2D physics engine from scratch in C++, leveraging SDL3 for rendering and input handling.
- Implemented collision detection, resolution, and forces such as air drag, impulse, and wind to simulate realistic object dynamics.
- Optimized performance to support 200 dynamic objects in real time, with ongoing scalability improvements and efficient rendering via two custom circle-drawing algorithms.
- Validated core engine functionality with Google Test, ensuring accuracy of physics calculations and reliability.

Simple Web Server | *Rust, Docker, GitHub*

September 2025 – Present

- Built a lightweight multithreaded HTTP web server in Rust from scratch using standard library components.
- Implemented request parsing, response handling, and static file serving to support basic web functionality without external frameworks.
- Designed a custom thread pool to efficiently handle multiple concurrent client connections while maintaining low memory overhead.
- Containerized the project using Docker and automated builds and tests via GitHub Actions CI.
- Applied safe concurrency and ownership principles in Rust to prevent data races and memory errors.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, C#, PHP, JavaScript, Typescript, Rust, MySQL

Frameworks & Libraries: Spring Boot, Vue.js, AngularJS, SDL3, Playwright, Cucumber
